

I would like to work at a company, where I could use my previous experiences gained from my early exchange years spent in

Japan and mastered it through practicing programming by creating various projects. I am currently in the field of Full Stack Web Development of HTML, CSS, Javascript and React framework, and Flutter programming languages (possessing intermediate knowledge) and had been coding for 3 years in Python. I am a self-taught developer, who likes challenges, a fast learner, dedicated, well-organized, punctual, open to improvement, and eager to learn new skills and abilities.
